HOW TO CARE FOR YOUR APOLLO OUTDOOR TV ENCLOSURE

GLASS

DO NOT ATTEMPT TO CLEAN THE INSIDE OF THE GLASS – IT HAS A SPECIAL COATING TO PROTECT THE TV FROM HARMFUL IR AND UV RAYS and it may be damaged.

To properly clean the EXTERIOR glass, we recommend the use of a soft cotton or microfiber cloth.

DO NOT USE paper towel, tissues, or rags as they may damage the coating on the glass.

We recommend a standard 70/30 isopropyl alcohol mix (same as you purchase at any drug store). Spray the alcohol mixture on a clean, soft cloth and gently clean the glass.

Note: Do NOT use Windex or any ammonia-based glass cleaner as it may damage the special coating on the glass and leave streaks.

TV

Gently dust the front of the TV with a soft microfiber cloth to remove any dust.

HOUSING

The enclosure housing can be cleaned with a soft soapy cloth and warm water to wipe dirt, dust, bird droppings, etc.

Rinse cloth frequently to avoid scratching the powder coated aluminium from dirt grit. DO NOT use the same cloth to clean the glass.

You can also hose down the enclosure regularly, however ensure the water is not aimed into the underside of the enclosure where the filtered air vents are located.

FILTERS

You can remove the filters in the bottom of the enclosure and gently rinse them in warm soapy, water. DO NOT SQUEEZE them as that will damage the cells. Rinse until water is clear and let dry before putting them back into the enclosure.
